

ANAEROBIC HYBRID REACTOR

AHR - Anaerobic Hybrid Reactor is advancement in Anaerobic treatment for Bio degradation of BOD & COD

Key Features:

- **Improved contact between biomass and wastewater**
- **Enhanced activity of the biomass due to adaption and growth**
- **Packed media acts as a gas-solids separator**
- **Low foot print compared to other reactors**
- **Low production of waste biological solids**
- **Production of methane gas**

Application:

- **Brewery & Distillery**
- **Food processing**
